

(The exam in the clinical complete denture, clinical partial denture, and the explained lectures of advanced complete denture)

1- Posterior teeth are set edge to edge may cause:

- a) Gagging Reflex
- b) Cheek biting**
- c) Reduce the taste
- d) Speech difficulties

2- Maxillary anterior teeth arranged :

- a) Facial to the ridge**
- b) Exactly on the ridge
- c) Lingual to the ridge

3- A patient who wears a complete maxillary denture complains of burning sensation in the palatal area this indicative of too much pressure being exerted by denture on the:

- a) Incisive foramen**
- b) Palatal mucosa
- c) Hamular notch
- d) Posterior palatal seal

4- overextended distobuccal corner of the mandibular denture will punch against which muscles during function:

- a) Buccinator muscle
- b) Zygomaticus muscle
- c) Masseter muscle**
- d) Temporalis muscle

5- After border molding the mandibular custom tray, it is important to check for dislodgement in order to detect areas of:

- a) Underextension of the tray
- b) Overextension of the tray**
- c) Thick borders

- d) Thin borders
- 6- A generalized speech difficulty with complete denture caused by:**
- a) Faulty tooth position
 - b) Faulty palatal contour
 - c) All of the above**
 - d) None of the above
- 7- Which of the following landmarks are relevant to location of posterior palatal seal:**
- a) hamular notches
 - b) vibration line
 - c) fovea palatine
 - d) all of the above**
- 8- How would you classify a removable partial denture in which a portion of the functional load is carried by the residual ridge at one end of the denture base segment while the other end of the base segment is supported by natural teeth ?**
- a) Tooth –born removable partial denture
 - b) Bilateral distal extension removable partial denture
 - c) Unilateral distal extension removable partial denture**
 - d) None of the above
- 9- The major connector is:**
- a) The connecting tang between the denture and other components of the prosthesis.
 - b) The part of the denture base which extend from the neck of the tooth to the border of the denture
 - c) The unit of the partial denture base that connects the parts of the prosthesis located on one side of the arch with those on the opposite side**
- 10- Which of the following Kennedy classes is tooth – born :**
- a) Class I
 - b) Class II
 - c) Class III**
- 11- What is the recommended treatment for patient who has lost her four maxillary incisors some time ago and has suffered excessive ridge resorption:**
- a) Six unit fixed bridge
 - b) No treatment
 - c) Removable partial denture**
 - d) Maryland bridge

12- In the mesial rest, guide plane and I-bar design, reciprocation is achieved by all of the following except :

- a) Rigid plating
- b) Minor connector
- c) Balancing occlusion**
- d) Contact areas of the proximal teeth

13- The cingulum rest is usually confined to preparation on :

- a) Maxillary canine**
- b) Maxillary lateral incisors
- c) Mandibular canine
- d) Mandibular lateral incisors

14- Advantage of The U-shaped major connector is increased:

- a) Rigidity
- b) Support**
- c) Stability
- d) None of the above

15- The most rigid major connector is :

- a) A-P palatal strap
- b) A-P palatal bar
- c) Palatal plate**
- d) Anterior palatal strap
